

Waste Crusher (Wood, plastic bottles, cardboard...)

Crusher is feature by a series of knives assembled on two parallel shafts with opposite rotating direction.

It stops automatically at the time of the presence of parts.

Crushing is desirable to reduce volume in order to optimize waste recovery.

Depending on the material to be crushed and the fineness of the desired ground material, a calibration grid can be added.

USE

- Wood OIW,
- Plastic bottles,
- Aluminum cans,
- Tin cans,
- Cardboard...

AVANTAGES

Reduction of waste volume.

Optimized waste recovery.
