

Pallet, Wood Crushers

Crusher is feature by a series of knives assembled on two parallel shafts with opposite rotating direction.

It stops automatically at the time of the presence of parts.

Crushing is desirable to reduce volume in order to optimize waste recovery.

Depending on the wood to be crushed, the wood chips can then be used as fuel or recycled in the wood industry.

We can offer:

- A single crusher to integrate
- A chassis-mounted crusher with mesh enclosure and manual tilting loading hopper
- A semi-automatic assembly with crusher and loading conveyor in a skip
- An automatic assembly with crusher, conveyor and overbelt for wood/metal separation

USE

- Palett,
- Wood OIW,
- Carpentry scrap,
- Sawmill waste,
- Chipboard boards, Plywood, MDF boards
- Boards
- Forest wood,
- Green waste,
- Cardboards (mixed with wood)

AVANTAGES

Reduction of waste volume.

Optimized waste recovery.

TECHNICAL DATA

Planetary gear motor $P=18\text{kW}$ in line or optional with perpendicular angle transmission.

49 knives with 4 teeth, thickness: 20mm
